

Engineering Committee Report
June 5, 2007

June 1, 2007 we received a report from the engineering firm (WRA,Inc.) hired to review the work we had scoped out for inspection on the water drainage and roadway elements of our community's infrastructure construction. The Engineering Committee reviewed the report, noted some comments and questions to be given to the engineer, and on June 3, 2007, forwarded those to the Board for sending on to the developer and the engineer. Once those questions and comments have been addressed, the Committee will make a final recommendation to the Board for their final approval of items to be put on our "punch list" of items to be remedied.

Sy Golden, Chair
