

## March 2007 Engineering Committee Report

Contacted the 2 engineering firms I had not heard from on our Request For Qualifications and was told that they had never received the Request. At their request, I Faxed them both the document. Both told me they would reply "soon".

After much treading in place, I Faxed the CDD engineers the list of requested documents which include the record drawings and permits we need for the engineering review for acceptance, which finally caused some movement, and a meeting with the engineer and the CDD people has been scheduled for March 20, 2007. The stated purpose of the meeting is to ascertain exactly what we are looking for, even though our list of requested documents has been "floating" around for over two months. Hopefully the "communications gap" will be closed at that meeting.
